

GUJARAT TECHNOLOGICAL UNIVERSITY
MCA – SEMESTER II – EXAMINATION – WINTER 2015

Subject Code: 620005

Date: 07/12/2015

Subject Name: Computer Oriented Numerical Methods

Time: 02:30 PM to 05:00 PM

Total Marks: 70

Instructions:

1. Attempt all questions.
2. Make suitable assumptions wherever necessary.
3. Figures to the right indicate full marks.

- Q.1 (a) Explain the following terms : 04
1. Blunders
 2. Formulation Errors
 3. Data Uncertainty
 4. Total Numerical Error
- (b) Let $x = 0.00458529$. Find the absolute error if x is rounded-off to three decimal digits. 03
- (c) What are the similarities and differences between Secant method and False Position method of finding root of a given equation $f(x) = 0$. Which one is best? Why? 07
- Q.2 (a) Geometrically explain Newton-Raphson method to find a root of the equation $f(x) = 0$ and hence derive the general formula. Also, discuss the pit-falls of Newton-Raphson method. 07
- (b) Obtain positive numerical solution of $x^3 + x^2 - 3x - 3 = 0$ using bisection method correct to four significant figures. Using Descartes's rule of sign, find how many roots the function has. 07

OR

- (b) Can Birge-Vieta method be used to find roots of any $f(x) = 0$? Find the root of the equation $x^3 + 2x^2 + 10x - 20 = 0$ correct up to three significant digits using Birge-Vieta method (Hint : Take $r_0 = 1$). 07
- Q.3 (a) Discuss different type of difference table in detail with an assumed suitable example. 07
- (b) Fit the following data with the power model ($y = ax^b$). Use the resulting power equation to predict y at $x = 9$. 07

| | | | | | | | | | | |
|-----|-----|-----|-----|-----|-----|-----|------|-----|------|-----|
| x | 2.5 | 3.5 | 5 | 6 | 7.5 | 10 | 12.5 | 15 | 17.5 | 20 |
| y | 13 | 11 | 8.5 | 8.2 | 7 | 6.2 | 5.2 | 4.8 | 4.6 | 4.3 |

OR

- Q.3 (a) From the following table, find P when $t = 142^\circ\text{C}$ and 175°C , using appropriate Newton's Interpolation formula. 07

| | | | | | |
|--------------------------------------|-------|-------|-------|-------|--------|
| Temp (t) $^\circ\text{C}$: | 140 | 150 | 160 | 170 | 180 |
| Pressure (P) kgf/cm^2 : | 3.685 | 4.854 | 6.302 | 8.076 | 10.225 |

- (b) What is inverse interpolation? Estimate value of x given following data when $y = 0.390$. 07

| | | | | | |
|--------|---|---|----|-----|-----|
| x | 0 | 1 | 3 | 4 | 7 |
| $F(x)$ | 1 | 3 | 49 | 129 | 813 |

- Q.4 (a) The values of pressure and specific volume of super heated steam are as follows : 07

| | | | | | |
|--------------------|--------|-------|-------|-------|--------|
| Volume (V) : | 2 | 4 | 6 | 8 | 10 |
| Pressure (P) : | 105.00 | 42.07 | 25.30 | 16.70 | 13.000 |

Find the rate of change of pressure with respect to volume when $V = 2$ and $V = 8$.

- (b) Evaluate $\int_{-2}^2 \frac{3x}{(4-x)^2} dx$ using Trapezoidal and Simpson's 1/3rd rule with six intervals. 07

OR

- Q.4 (a) A body is in the form of a solid of revolution, whose diameter d in cm of its sections at various distances x cm from one end is given in the table below. Compute the volume of the solid. 07

| | | | | | | | |
|-------|------|-----|------|------|------|------|------|
| $x :$ | 0 | 2.5 | 5.0 | 7.5 | 10.0 | 12.5 | 15.0 |
| $d :$ | 5.00 | 5.5 | 6.00 | 6.75 | 6.25 | 5.5 | 4.00 |

- (b) The function $y = \sin(x)$ is tabulated below. Find the value of $\cos(1.74)$ and $\cos(1.84)$ using interpolation technique. 07

| | | | | | |
|-----------|--------|--------|--------|--------|--------|
| x | 1.70 | 1.74 | 1.78 | 1.82 | 1.86 |
| $\sin(x)$ | 0.9917 | 0.9857 | 0.9782 | 0.9691 | 0.9585 |

- Q.5 (a) Given the following differential equation $\frac{dy}{dx} = \frac{1-xy}{x^2}$, with $y(1) = 1$. Compute $y(1.1)$, $y(1.2)$ and $y(1.3)$ using Runge-Kutta third order method and obtain $y(1.4)$ using Milne- Simpson's predictor corrector method. 07
- (b) Using Gauss Seidal method, solve the following set of simultaneous equations upto three decimal place accuracy. Do partial Pivoting 07

$$\begin{aligned} x + 3y + z &= 10 \\ x + 2y + 5z &= 12 \\ 4x + y + 2z &= 16 \end{aligned}$$

OR

- Q.5 (a) Given the following differential equation $\frac{dy}{dx} = (x+y)e^{-x}$, with $y(-0.1) = 0.9053$. Compute $y(0)$, $y(0.1)$ using Runge-Kutta second order method and obtain $y(0.3)$ using Adam- Bashforth-Moulton's predictor corrector method. 07
- (b) Find numerically largest eigen value and corresponding eigen vector of the following matrix using power method by taking $X_0 = [1, 1, 0]^T$. 07

$$\begin{bmatrix} 3 & 2 & 4 \\ 2 & 0 & 2 \\ 4 & 2 & 3 \end{bmatrix}$$
